

BANANA TISSUE CULTURE

All smart farmers first choice

1

PEST FREE AND DISEASE FREE PLANTS

As the mother plants are growing in the laboratory they are disease free

2

EARLY HARVESTING

As the plants are kept in optimal temperature, once they are sown, they can be harvested in 11 months

3

QUALITY AND UNIFORM FRUITS

Each Loom will have same size, quality and weight of fruits.

4

30 KG LOOMS = MORE RETURNS

Non Tissue culture does not provide more than 18 kgs of fruit per loom

5

MORE PLANTS PER ACRE

1200 plants per acre or 400 per Bigha

6

UPTO 3 PLANTS IN 30 MONTHS

Can save you 5 months of cultivation period on field

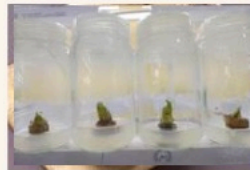

Lab to Farm

RS. 4,800 EXPENSE TODAY = RS. 80, 000 PROFIT TOMORROW
